Summary

Product designer with 4+ years of experience taking B2B tools and mobile-first customer apps from early concept through developer handoff and QA. Most recently the only designer at a clean-energy startup, covering operations tools, a warehouse app, and the account app customers used to buy power. A healthcare background taught me to watch how people actually work before designing for them, and I'm looking for a larger design team to learn from.

Work Experience

Founding Product Designer, MykroGrid **May 2023 – August 2026**

- Designed the customer account app (mobile-first web) prepaid customers used to buy power and track balance, usage, and transactions, then extended it for institutional multi-meter accounts and grid-owning clients who submit work orders.
- Changed the research approach for a monitoring platform engineers were not using, asking them to walk through their full day on site, then redesigned it around what they actually did. Platform usage increased afterward.
- Created Grid Builder, a multi-step warehouse tool that turns system size and client type into an editable bill of materials with live stock status. Revised it after a stakeholder review (typed quantities for large orders, a procurement path for custom items). Now used by the warehouse team to plan grids and spot materials to order.
- Owned design of the warehouse management system across dashboard, procurement, inventory, outbound tasks, and purchases for desktop and mobile, with NGN and USD currency support.
- Led the mobile redesign of the Admin Portal for Customer Success, built around how support staff handled requests.
- Redesigned the public marketing website for three audience segments, with responsive desktop, tablet, and mobile layouts.
- Delivered prototypes and specs to two developers and partnered with them through QA, as sole designer across 4+ platforms balancing requests from product, engineering, and sales. Built and maintained the shared Figma component library and tokens.

Product Designer, IntelyEdu / IntelyCare **July 2022 – December 2022**

- Partnered with product and engineering to find and fix usability problems across the IntelyCare Edu platform through user research and usability testing.
- Designed high-fidelity concepts and interactive prototypes for a full website redesign to make the company's service offering clearer.
- Evaluated third-party tools for platform integration, documenting technical constraints and design implications for the product team.

UX/UI Designer, Basha Works LLC **October 2021 – April 2022**

- Facilitated stakeholder workshops to surface user needs, define requirements, and map end-to-end workflows for a 0-to-1 mobile product.
- Created high-fidelity mobile interfaces and interactive prototypes that aligned engineers and stakeholders on direction.
- Built a component library to keep the mobile app consistent, and worked with engineers through production handoff.

Physical Therapy Technician, Sports Medicine North **October 2018 – June 2020**

- Guided patients through exercises and relayed their goals, pain points, and limits to therapists to help shape exercise plans and post-operative protocols.

Skills

Design: Complex Workflows, Interaction Design, User Flows, Information Architecture, Wireframing, Prototyping, Responsive and Mobile Design
Research and Collaboration: User Research, Usability Testing, Stakeholder Workshops, Design Reviews, Agile, Cross-functional Collaboration
Handoff: Component Libraries, Design Tokens, Specs, Developer Handoff, QA
Tools: Figma, Figma Make, Adobe Creative Suite, Claude Code and AI-assisted prototyping

Education

Google UX Design Professional Certificate | Coursera, April 2021 – October 2022
B.A. Sports and Movement Science | Salem State University, 2014 – 2018
